the United States.
Established in 1926, the company is headquatered in Oviedo, FL, and has growing and sales locations in Florida Texas and California, with additional growing locations Arizona and Mexico.

#### Belle Glade Fire Department to give away 500 smoke detectors to homeowners

By Brenda Bunting

Fire truck sirens go off in the night and wake you from a sound sleep. You wonder who's house is on fire and if everyone got out. Then you drift back to

sleep.

More house fires happen during the winter months, even in mild south Florida, than any other time of the year. We hear of children and adults dying in fres because they laid in thave smoke detectors, or the ones they had in their homes had dead batteries.

The Belle Glade Fire Department wants to give away almost 500 smoke detectors to local families who do not have them in their homes.

"Our desire is to get smoke detectors in as many homes as possible," says Belle Glade Fire Chief Steve Rice. "We know that smoke detectors an save lives," he added.

In October of 1997, State Fire Marshall Bill Nelson launched a smoke detector give-away statewide. The City of Belle Glade received close to 500 smoke detectors from the campaign.

Chief Rice said they will be eep. More house fires happen dur-

given to any family requesting them if they do not currently have smoke detectors in their

"We especially want to see that our elderly and low in-come residents have an oppor-tunity to get one of these," said

Chief Rice.

Smoke detectors can not be installed into apartments because they must be hardwired into the electric and apartment owners are responsible for these detectors.

Personnel from the Belle ade Fire Department will install the smoke detectors and also perform a complimentary home safety survey while at

home safety survey while at the home.

"If at the present time you do have a working smoke detector and would still like to have a free home safety survey, please call and we will set up an ap-pointment for you," said Lt. Donald Hamilton, fire mar-shall for the City of Belle Glade.

Glade.

To set up an appointment for installation of a smoke detector call the Belle Glade Fire Department at 996-2032. Ask for Fire Chief Steve Rice or Lt. Donald Hamilton.

of interest to you."

Enclosed in the envelope were two stamps bearing the image of Jahre C. Doppler - the est famous man you never

heard of.

His name is spoken every
day by thousands of people and
his discoveries save hundreds
of lives each year, yet most
people no very little about this
19th century Austrian physiciat

cist.

Jahre C. Doppler didn't invent the Doppler radar but he did discover something called the "Doppler shift," the basic principle behind today's

basic principle behind today's sophisticated Doppler radars. The best way to understand the Doppler shift is to imagine yourself at a train station. Suddenly, you hear the whistle of the oncoming train, which gets progressively higher in pitch as it approaches and sud-denly gets lower after it pass-es.

The Doppler shift is the frequency of a sound, light or microwave energy that reaches a receiver and then changes when the source of the energy and the receiver are in relative

motion to one another.

Doppler radars bounce microwaves off raindrops or ice crystals, and by measuring the difference between the trans-

rain or snow, while the Doppler radar can measure the speed of the wind. And it is the wind that can cause big prob-

sensitive enough to actually detect a tornado as it begins to form inside the thunderstorm. In fact, the National Weather Service frequently issues tornado warnings based solely on

Doppler radar reports.

That means folks have more time to prepare for the twister. It means more lives are being saved each year. The National Weather Service (NWS) can often provide warning lead times of 20 minutes or more thanks to Doppler radar. In the days of conventional

radar, a tornado warning was not issued by the NWS until the twister had actually been sighted on the ground. In many cases, there was no lead

Because of the work of a little know Austrian physicist in the first half of the 19th centu-ry, the chance of a major torna-do striking a city today without warning is almost impossi-ble. I wrote back to Mrs ble. I wrote back to Mrs. Kinney thanking her for her kindness and for the stamps of Jahre C. Doppler. I told her that I would frame the stamps and hang then in a place of honor. The Stamps are now located directly over the con-trols of my Doppler radar. (Mike Lyons is the chief weather forecaster for WPBF-TV)

It is a shame that for the busiest week of the year on Lake Okeechobee, Mother Nature decided to see how many cold fronts she could send this way in a week. The wind has made for a rough week's fishing.

In spite of the weather, there have been a few nice catches made this week. The biggest problem has been finding water that isn't dirty from all the wind. Along with the high wind. Along with the high

that isn't dirty from all the wind. Along with the high winds and chilly temperatures has came an influx of water from the Kissimmee River drainage. The higher water lever drainage. The higher water levels (177) have been moving the fish further back into areas that were too shallow just a few weeks ago. There is a lot of current in some of the rim canal due to the heavy releases of water into the Calloossahatchi river at Moore Haven.

On these windy days a spin-nerbait is by far the best bet in lure selection. White or white and Chartreuse seems to both work well. I find a willow leaf blade will normally come through the grass real well as will the three bladed J & J Hurricane.

If the wind isn't blowing then a topwater such as a FishHead Lure or Chug Bug will work as long as the water is fairly clean. And last, but not least, is the old favorite a June Bug 8 to 10 inch worm fished with a very light Gambler screw in type sinker.

very light Gambler screw in type sinker.

The FLW Your will return to Florida this week on Lake Toho tout of Kissimmee. As you may remember the first FLW Tour very large the single sin

years.
To all a good bite...

# Beware of the dangers that lie in your home

By Paula Swaford

The last time you went to the grocery store you may have purchased some. They are all over your house. They're in your child's school. They are easy to obtain, easy to hide, and the accisest way for child. easy to obtain, easy to hide, and the easiest way for children and adolescents to "get high." Most of us are in the dark regarding the popularity and dangers of inhalant use by our children. According to national surveys, inhaling dargerous products is becoming one of the most widespread problems in the country. It is as popular as marijuana with young people. More than a milyoung people. More than a mil-lion people used inhalants to get high, just last year. By the time a student reaches the

have used inhalants.

Inhalant use refers to the intentional breathing of gas or vapors with the purpose of reaching a high. They are reaching a high. They are legal, everyday products which have a useful purpose, but can be misused easily. The common items include not only the obvious spray paint and glue, but things like nail polish, typewriter correction fluid, felt timparkers, air freshener, butane and even cooking spray to name a few Statistics show that young, white males have the highest usage rates, with Hispanic and Native American populations coming in second and third. population and third.

The effect of inhalants on the

eighth grade, one in five will, body produces a state similar have used inhalants. to anesthetics, which alow Inhalant use refers to the down the body's function intentional breathing of gas or Varying upon the level of

Paula Swaford, RN

dosage, the user can experislight stimulation, feelings of less inhibition, or loss of

consciousness. They can also suffer from Sudden Sniffing Death Syndrome. This means the user can die the first, tenth, or one hundredth time he or she uses an inhalant. Other effects include damage to the heart, kidneys, brain, liver, bone marrow, and other organs. Inhalants are physically and psychologically addict-ing and users suffer withdraw-al symptoms.

Parents and teachers alike should be aware that it is should be aware that it is never too early to teach your children about the dangers of inhalants. Inhalant use starts as early as elementary school and is considered a gateway to further substance abuse, often used first before marijuana or

cocaine. Parents often remain ignorant of inhalant use; they are poisons and toxins and ould be discussed with your children. Children who com-monly use inhalants may have low self-esteem, anxiety, depression and/or anger. Users have dismal or no future plans and may be uncertain whether the future is worth waiting for.

There is a common link between inhalant use and problems at school... falling

problems at school.. falling grades, chronic absences, and general apathy. Signs of usage may include paint or stains on body or clothing; spots or sores around the mouth; red or runny eyes or nose; chemical breath odor; drunk, dazed or dizzy appearance; nausea; loss

of appetite; anxiety, excitability or irritability.

Treatment facilities for inhalant users are rare and difficult to find. They suffer a high rate of relapse and require thirty to forty days of detoxification. If you or some-one you know is seeking help for abuse, you can contact the National Inhalant Prevention Coalition at 1-800-269-4237; for information on treatment for information on treatment of information on treatment cen-ters and general information of inhalants. On March 15-21, 1998, they will spearhead the annual National Inhalant and Poisons Awareness Week to educate communities about this rapidly growing problem Until next time. stay informed and stay healthy. information on treatment cen-

# Effects of heat and cold on the body able to evaluate your injury and make the appropriate rec-ommendations based on the

By Benard Stern, D.C.

Pain and muscle spasm are common responses to injury. Tendons and ligaments are kinds of tissue that connect muscles and bones to each basic building material of mus-cles, tendons, and ligaments is a protein called collagen. Under normal conditions collagen acts like a rubber band; it gen acts like a rubber band; it stretches when tension is applied (as when we pull a rubber band) and returns to its normal length when tension is released. When collagen is stretched to far, it tears. Ir stretched to far, it tears. In this tearing process, blood ves-sels are torn and blood cells and fluid escape into the apaces among the muscle fibers. This damage is visible on the surface of the skin as a swollen, bruised area. Heat as you would expect, increases the elasticity, or "stretchability", of collagen. When heat is applied, the mus-cles, tendons, or ligaments cles, tendons, or ligaments

cles, tendons, or ligaments relax in that part of the body and are more able to be stretched by exercise. Moving the affected area is easier. Heat seems to be able to reduce pain, although the way in which heat works on pain receptors is not well under-stood. Muscle spasms also

decrease or disappear.
Unfortunately, heat therapy can have serious drawbacks for an acute injury. Heat increases the metabolism of the cells in the area that is being heated. This means the cells use more oxygen and produce more products of metabolism. The result is increased blood flow to the area to bring oxygen and remove byproducts. The This means the cells use more remove byproducts. The site of an acute injury causes more blood cells and fluid to escape into the spaces among the muscle fibers, which may

result in more swelling and pain.
Cold increases the stiffness of collagen and its resistance to of collagen and its resistance to stretch. Cold decreases feeling in an area by reducing the ability of the nerve ending to

conduct impulses. It may also reduce pain by "countering" the injury. For example, you might counter the pain of a sore tooth by pinching yourself hard on the legical part of the calls, cold decreases it. This decreased activity and blood flow reduces swelling and internal bleeding at the site of an acute injury.

at the site of an acute injury Cooling the deep tissues also reduces muscle spasms by reducing the muscle's ability to maintain a contraction.

In general, use ice for acute injuries and avoid heat. Cold therapy should be used exclusively in the first two days after injury. In addition to ice, rest, compression, and eleva-

Belie Glade Chiropractic, Inc. 425 S.E. 2nd Street 996-7801

weeks if swelling remains a Cold therapy should not be used on persons who (1) have circulation problems, (2) are unconscious, (3) are unable to

respond or cannot feel cold, or (4) are allergic to cold. Heat can be used in the repair stage of an injury to build new tissue and regain flexibility (repair stage is between five days and six weeks after the injury). It can also be used to relieve the chronic pain associated with arthritis

Heat should not be used in Heat should not be used in an acute injury or where discoloration or swelling is present; it should not be applied to a person who has trouble feeling heat or on infants or very elderly persons.

If you have sustained an injury it would be to your advantage to seek chiropractic care. A chiropractor will be

finding. Chiropractic adjust-ments will enable the body to respond better and quicker to respond better and any therapies applied

## Local students receive scholarships

By Jennie M. Sears

Staff Reporter The Concerned Citizens of South Bay, in conjunction with Wackenhut Corporation, gave scholarships in the amount of \$1,000 to 10 students for the Glades area.

During their senior year in high school each student met the academic requirements to enter into a college or uni-versity. Wackenhut Corporation and the Concerned Citizens of South Bay want to invest in these students' education by giving them a scholarship fund to assist

high school years to further their educations by attending

college.
The recipients are: Adrian
Ramon Dowdell, Florida

them financially in their educational goals.

The Concerned Citizens of South Bay held a reception on December 30, to award the scholarships to the 10 of Central Florida, Robert students. At the reception parents, city commissioners, Mayor Clarence Anthon, Palm Beach Community Wackenhut representative and citizens of the area were present to honor the students who worked so hard their high school years to further Shameksia. Mike Lyons Weather

thoughtful gifts I have ever received. And it came from a

total stranger. I've never met Ann Kinney of Jupiter but she knows me, since she watches my weather broadcasts each night. She has heard me describe cold fronts, hurricanes and Doppler radar.

"We watch your weather and hear you talk about Doppler radar," she said in a letter to me. "While in Austria, I pur-chased these stamps celebrat-ing 150 years of Doppler's dis-coveries. Thought it might be of interest to you." of interest to you."

Enclosed in the envelope

were two stamps bearing the image of Jahre C. Doppler - the most famous man you never heard of. His name is spoken every day by thousands of people and his discoveries save hundreds of lives each year, yet most people no very little about this 19th century Austrian physi-

cist.
Jahre C. Doppler didn't
invent the Doppler radar but
he did discover something
called the "Doppler shift," the
basic principle behind today's
sophisticated Doppler radars.

The best way to understand the Doppler shift is to imagine yourself at a train station. Suddenly, you hear the whistle of the oncoming train, which gets progressively higher in

pitch as it approaches and sud-denly gets lower after it pass-The Doppler shift is the frequency of a sound, light or microwave energy that reaches a receiver and then changes when the source of the energy and the receiver are in relative motion to one another.

Doppler radars bounce

motion to one another Doppler radars bounce microwaves off raindrops or ice crystals, and by measuring the difference between the transmitted and received frequen-cies, the radar can calculate the speed of the air in which the rain drops are embedded.

Conventional radars can only detect the intensities of rain or snow, while the Doppler radar can measure the speed of the wind. And it is the wind that can cause big prob-

Today's Doppler radars are sensitive enough to actually detect a tornado as it begins to form inside the thunderstorm. In fact, the National Weather Service frequently issues tor-nado warnings based solely on Doppler radar reports. That means folks have more

time to prepare for the twister. It means more lives are being saved each year. The National Weather Service (NWS) can often provide warning lead times of 20 minutes or more thanks to Doppler radar.

In the days of conventional radar, a tornado warning was not issued by the NWS until the twister had actually been sighted on the ground. In many cases, there was no lead

Because of the work of a little know Austrian physicist in the first half of the 19th century, the chance of a major tornado striking a city today with-out warning is almost impossi-ble. I wrote back to Mrs. Kinney thanking her for her kindness and for the stamps of Jahre C. Doppler. I told her that I would frame the stamps and haing then in a place of honor. The stamps are now located directly over the controls of my Doppler radar.

(Mike Lyons is the chief weather forecaster for WPBF-TV)

It is a shame that for the busiest week of the year on Lake Okeechobee, Mother Nature decided to see how many cold fronts she could send this way in a week. The wind has made for a rough week's fishing.

wind has made for a rough week's fishing.

In spite of the weather, there have been a few nice catches made this week. The biggest problem has been finding water that isn't dirty from all the that isn't dirfy from all the wind. Along with the high winds and chilly temperatures has came an influx of water from the Kissimmee River drainage. The higher water lev-els (17) have been moving the fish further back into areas that were too shallow just a few weeks ago. There is a lot of cur-rent in some of the rim canal weeks ago. There is a lot of cur-rent in some of the rim canal due to the heavy releases of water into the Calloossahatchi river at Moore Haven.

On these windy days a spin-nerbait is by far the best bet in lure selection. White or white and Chartreuse seems to both work well. I find a willow leaf work well. I find a willow leaf blade will normally come through the grass real well as will the three bladed J & J Hurricane.

If the wind isn't blowing then

If the wind isn't blowing then a topwater such as a FishHead alure or Chug Bog will work as long as the water is Tairly clean. And last, but not least, is the old fitworite a June Bug 8 to 10 inch worm fished with a very light Gambler screw in type sinker.

The FLW Tour will return to Florida this week on Lake Toho out of Kissimmee. As you may remember the first FLW Tour event was staged in Clewiston

event was staged in Clewiston ust two short years ago. The FLW Tour has now grown to the largest purses ever offered the largest purses ever offered in professional angling history. Of a news worthy note, Charlie Hoover was announced as becoming the new President of Operation Bass. Most of you will know Gharlie as a member of the Ranger Boats manage-ment where he has influenced the sport of bass fishing in a very positive manner for many years.

years.

To all a good bite...

#### of the Beware dangers that lie in your home

By Paula Swaford

By Paula Swaford
The last time you went to the
grocery store you may have
purchased some. They are all
over your house. They're in
your child's school. They are easy to obtain, easy to hide, and the easiest way for chiland the easiest way for chil-dren and adolescents to "get high". Most of us are in the dark regarding the popularity and dangers of inhalant use by our children. According to our children. According to national surveys, inhaling dan-gerous products is becoming one of the most widespread problems in the country. It is as popular as marijuana with young people. More than a mil-lion people used inhalants to get high, just last year. By the time a student reaches the eighth grade, one in five will have used inhalants

Inhalant use refers to the intentional breathing of gas or vapors with the purpose of reaching a high. They are legal, everyday products which legal, everyoay products when have a useful purpose, but can-be misused easily. The common items include not only the obvi-ous spray paint and glue, but things like nail polish, type-writer correction fluid, felt tip markers, air freshener, buta markers, air freshener, butane and even cooking spray to name a few. Statistics show that young, white males have the highest usage rates, with Hispanic and Native American populations coming in second and third.

The effect of inhalants on the

body produces a state similar to anesthetics, which slow down the body's function. Varying upon the level of

Paula Swaford, RN

dosage, the user-can experi-ence slight stimulation, feel-ings of less inhibition, or loss of

consciousness. They can also suffer from Sudden Sniffing Death Syndrome. This means the user can die the first, tenth, or one hundredth time he or she uses an inhalant Other effects include damage other effects include damage to the heart, kidneys, brain, liver, bone marrow, and other organs. Inhalants are physical-ly and psychologically addict-ing and users suffer withdrawal symptoms

Parents and teachers alike should be aware that it is never too early to teach your children about the dangers of inhalants. Inhalant use starts as-early as elementary school and is considered a gateway to further substance abuse, often used first before marijuana or cocaine. Parents often remain ignorant of inhalant use; they are poisons and toxins and should be discussed with your children. Children who comlow self-esteem, anxiety, depression and/or anger. Users have dismal or no future plans and may be uncertain whether the future is worth waiting for

There is a common link between inhalant use and problems at school... falling grades, chronic absences, and general apathy. Signs of usage may include paint or stains on body or clothing; spots or sores around the mouth; red or runny eyes or nose; chemical breath odor; drunk, dazed or

of appetite; anxiety, excitabili-ty or irritability.

Treatment facilities for inhalant users are rare and difficult to find. They suffer a difficult to Ind. They suffer a high rate of relapse and require thirty to forty days of detoxification. If you or someone you know is seeking help for abuse, you can contact the National Inhalant Prevention Coalition at 1-800-269-4237 for information on treatment cen-ters and general information of inhalants. On March 15-21, 1998, they will spearhead the annual National Inhalant and Poisons Awareness Week to educate communities about this rapidly growing problem. Until next time... stay

informed and stay healthy.

#### Belle Glade's water looks and smells bad

"I am writing regarding the water situation in Belle Glade. We have always used city water for everything, including drinking. However, for quite a long time now, it has been hadly discolored and has a horrible smell. It is continuous, not just once in a while and it is not only in our house- other people have complained about this same thing.

Why can't something he done about this? We

about this same thing.

Why can't something be done about this? We should not have to buy our drinking water, but like others, we are beginning to worry about the quality of the drinking water. We pay for our utilities. During the holidays we had family and friends in and the smell of the water was very embarras

very embarrassing.
Whether it has anything to do with it or not some of the lift stations have a very bad odor also, but that one located at N.E. Ave. B between 2nd and 3rd Street is especially bad.
Surely, some of the folks who live right there have complained, too. Let's get something done about these problems."

Belle Glade City Manager Lomax Harrelle responds: "The City of Belle Glade, unlike responds: The City of Belle Glade, unlike other municipalities that receive their water supply from underground aquifers, obtains its water from Lake Okeechobee, which is a shallow lake. When severe weather arises, inherent problems are identified with this type of resource. High winds and/or continuous rains affect the water clarity and surrended collds in affect the water clarity and suspended solids in the lake, thereby creating a need for over pro-

ealm Beach County Health Department and the Florida Department of Environmental Protection dictate guidelines for chlorinating and processing water so that safe drinking water is provided. # Survey finds shoplifting and employee theft cost retailers billions

Source: Richard Hollinger University of Florida New

The nation's retailers lost an estimated \$25.7 billion last year from employee theft, shoplifting, administrative error and vendor fraud, according to the seventh annual National Retail Security Survey. The survey of retail securi-

vey. The survey of retail security executives by researchers at the University of Florida was released in December.

The losses, known as inventory shrinkage, were 1.77, percent of total 1996 retail sales, down slightly from the year before, according to the survey. Employee theft made up 41.4 percent of the total losses, shoplifting 35.1 percent, administrative error 17.6 percent and vendor fraud 5.9 per

cent.
With more than three-quarters of the losses coming from
employee theft and shopliting,
survey respondents said hitech electronic systems to monitor employees and lerchandise were more likely to be
used in the coming year.
"The survey respondents"

"The survey respondents tended to show greatest intertended to show greatest inter-est in the newer, more techno-logically advanced alterna-tives," said Richard C. Hollinger, director of UF's Security Research Project, which conducts the survey.

The national retail market is extremely competitive, and retailers appear to be looking to sophisticated electronic sys-tems to reduce losses and increase profit margins," Mr. Hollinger added. Closed circuit televisions at the registers and electronic security tags embed-ded in products and packaging by the manufacturer were among the "hottest new items,"

among the "hottest new items," the survey said.

"More retailers and vendors are starting to have security labels installed at the manu-facturer by embedding them in the product itself or in primary packaging." said Joe Ryan, vice president of Global Source Tag-toring for Sensormatic Electron-cing for Sensormatic Electronging for Sensormatic Electron-ics Corp., the world's leading manufacturer of electronic ecurity systems

"This process, called source tagging, is one of the fastest

growing areas of retail securi-ty," said Mr. Ryan.

Although observation mir-rors, cables, locks and chains, and armed security guards still were among the most common deterrent strategies, they also were among those most likely to see decreased usage in the o see decreased usage in the ext year, the survey said. One of the most dramatic

findings of the survey was a 42 percent increase in the number of empty packaging found on shelves, from 893.6 to 1,270 empty boxes per \$100 million sales. For example, a large dis-counter with \$34 billion in annual sales could have as many as 431,800 empty pack-ages found in its stores in a

Mr. Ryan said the increase in empty boxes was evidence of shoplifters' increasing efforts to defeat anti-shoplifting labels applied to the outside of packages that sound alarms if removed from the store without being deactivated.

Among the survey high-

· Some of the highest los were reported for books, cards, gifts and novelties, as well as toys and hobbies, while some of the lowest were reported for furniture, optical items and consumer electronics.

• Above-average losses were

reported in women's apparel, while below-average losses were reported in men's appar-

el.

• Retailers reported apprehending an average of 256 shoplifters per \$100 million in sales but only 32.8 employee theft apprehensions per \$100

million.

• Retailers lost an average of

• Retailers lost an average of \$172.28 per shoplifting inci-dent, compared with \$9419.29 per employee theft incident. • Retailers were nearly nine times more likely to seek pros-ecution of shoplifters (109 prosecutions per \$100 million in sales) than cases of employ-ee theft (12.5 prosecutions per \$100 million). ee theft (12.5 \$100 million).

anonymous responses to a questionnaire returned by a cross section of retailers repre-senting 24 different marketing

The typical respondent was a larger retail firm, but researchers said the poll of respondents was typical of the size and distribution of retail-ers in the United States. Retail market segments-

reporting above-average shrinkage percentages were books and magazines (4.12 percent); cards, gifts and novelties (2.69 percent); toys and hob-bies (2.44 percent); jewelry (2.27 percent); cameras (2.05, percent); shoes (2.02 percent) and women's apparel (1.96 per-cent). Market segments report ing below-average shrinkage and below-average shrinkage were men's apparel (1.70 per-cent); household furnishings (1.69 percent); full-line depart-ment stores (1.60 percent); dis-count stores (1.65 percent); sporting goods (1.55 percent); convenience stores (1.62 per-cent); supermarket and green; cent); supermarket and grocery (1.47 percent); liquor, wine and beer (1.28 percent); consumer electronics (0.9); optical (0.7) and furniture (0.32).

The University of Florida's Security Research Project mission is to provide a reliable and unbiased source of research, statistics and information on topics related to private securi-

ty and retail loss prevention.

Sensormatic provided principal financial support for the survey project in the form of an unrestricted research grant Sensormatic is the world lead-er in providing electronic secu-

er in providing electronic security systems to retail, commercial and industrial markets.

TWO PROMOTED AT BANK OF BELLE GLADE....W.W. Mikell, president of Bank of Belle Glade (center), recently announced the promotion of two officers, Mark Deitz (left) to vice president and cashier, and W. Lee Mikell (right) to assistant vice president. Mr. Deitz joined the bank in May of 1990 as an operations officer, after having worked several years with Clewiston National Bank. He is a graduate of the Florida School of Banking at the University of Florida and various American Institute of Banking courses. He lives in Belle Glade. Lee Mikell joined the bank in the spring of 1994 as assistant cashier after having worked two years at Citizens Bank of Frost-proof and five years at the First Florida Bank in Punta Gorda while he was in college. Lee was born and raised in Belle Glade. He attended Glades Day School and received a bachelors degree in finance at the University of South Florida. He makes his home in Belle Glade with wife, Tracy, and son Dennis.

# Osprey nesting platforms placed around the Herbert Hoover Dike

The Corps of Engineers, in cooperation with Florida Pow-er and Light Company, recent-ly installed artificial Osprey nesting platforms around a portion of the Herbert Hoover Dike. with Florida Pow

Six platforms were placed between Clewiston and John Stretch Park where nuisance exotic trars where nuisance exotic trees were removed as part of the Corps Exotic Tree Removal Project. The platforms allow breeding Ospreys to remain in areas where the trees were removed. The wooden platform frame measures three feet by three feet and is mounted on top of a 45 foot support pole which can easily be seen from the Okeo-chobee Waterway, the Florida National Scenic Trail, and from U.S. Highway 27. Although some Ospreys nest close to man and can tolerate human activity, disturbances should be avoided during incushould be avoided during incu-bation and early nesting, which occurs winter through

Arrested persons who later are found not guilty or had the charges against them dropped are welcome to let us know. We will confirm the information and print it.

# The Everglades... continued from Page 1

There are controversies associated with the project, however. Funding is an issue: The federal government has yet to provide its share for the project, while the water management district has already expended considerable dollars on the federal component. Alligator Alley toll revenues are also problematic. While the good news is that Compress this ware authorized the revenues are any problemater. When the government is news is that Congress this year authorized the release of excess toll revenues for use on the project, the bad news is that the tolls may only amount to \$24 million through the year 2016 instead of the \$60 million originally estimated. instead of the \$60 million originally estimated. The water management district has also made substantial adjustments, well beyond the legislatively-adopted Conceptual Design Document, to the design for STAs 5 and 6. This has required the purchase of 2000 additional acres of land and is driving up the cost of the project and adding to the District's cash flow problem. In addition to funding, it is also unclear how a recently issued US Army Corp of Engineers permit will impact the project. The terms of this permit could be in conflict with the Everglades Forever Act and increase project costs and time frames.

Best Management Practices in the EAA All farms in the EAA are in compliance with the regulatory requirements of the Everglades Forever Act. Over the last three years the program has resulted in reduction in phosphorus of gram has resulted in reduction in phosphorus of 51%. In 1996, the first year all BMPs were required to be in place, the program achieved a 68% overall reduction! This is more than double the 25% reduction required by the Act and is unprecedented in terms of timing and effective-

Reductions in phosphorus flowing from EAA to the Everglades began to be observe EAA to the Everglades began to be observed in 1994, the year management practices began to change. 1996 was the first year all farms had installed the facilities required to conform to the new management plans.

Water Quality Improves, Water Standards Met

In general, there has been a significant improvement in water quality in the three years since the Everglades Forever Act was passed, and this is occurring with only the prototype STA - the Everglades Nutrient Removal project in operation. The current three-year average for phosphorus concentration in EAA runoff is 100 ppb. Prior to implementation of BMPs, the average concentration was 15 pph.

BMPs, the average concentration was 175 ppb.
Of special note is the fact that the water quality standards established for Everglades National Park and the Loxahatchee Wildlife Refuge under the federal settlement are being met before the construction of any STAs.

met betore the construction of any SIAS.

Phosphorus levels have been below both the interim and the long term standards for the Refuge since June 1995! In April 1997, the concentration averaged less than 6 ppb! Likewise, phosphorus limits in Shark River Slough in the Park have been met since December 1995, with an average concentration for the past 12 months of 8 ppb!

In short, it seems that Florida has a very suc instance, it seems that Forman has a very suc-cessful program underway. The requirements of the Everglades Forever Act are being carried, out; early results exceed all expectations, and the standards for water quality established in the federal settlement agreement are being con-sistently achieved. One troubling note is that water exterior the Everglades from Lake Okeo. water entering the Everglades from Lake Okeewater entering the Everglades from Lake Okechobee is now significantly higher in phosphorus than the storm runoff from the EAA. As the Lake is used more and more to supply water for the needs of the Everglades it is apparent that EAA farms will become less and less a factor in the overall phosphorus budget of the system.

The declining trend in the phosphorus concentration due to agricultural Best Management Practices is evident. For the first time ever the three-very average concentration in

ever the three-year average concentration in Lake Okeechobee flow to the Everglades has a higher concentration than the agricultural storm runoff. This will pose a much different set of cleanup challenges as Everglades restora-

APPRECIATION FROM THE PRESIDENT ... Cleo and Mattie Lealand of Belle Glade received a Certificate of Appreciation from President Bill Clinton recently for their dedication to the Democratic Party and long-time support. The Lealands contribute to many charitable orga-nizations and at age 77, Mr. Lealand is still working in his lawn maintenance business.

# U.S. Sugar says it agrees with Secretary Babbit about purchase

Officials with United States Sugar Corporation said they endorse comments published recently by Secretary of Interior Bruce Babbitt that the purchase of the Talisman farm land is also a purchase of water and that water storage for urban and natural system use is a worthy objective.

Babbitt said he envisioned an upstream water storage for an upstream water storage for

an upstream water storage "for downstream water users...including the Ever-glades and the well fields that supply five million inhabitants in coastal cities..."
"Last month we agreed with

the National Audubon Society and urged the government to purchase Talisman," said Robert Buker Jr., senior vice president of U.S. Sugar. "Today we agree that Secretary Babbitt's outline to provide a clean bitts outline to provide a clean and ample water supply for growing South Florida and the Everglades is the right objec-tive for the use of the lands in the southern Everglades area. "As Vice President Al Gore

National Park 50th Anniver-sary on Dec. 6, land swaps for some of the Talisman land with the farmers will be neces-

sary to crate efficient water storage areas." Buker said. "We will work cooperatively with the government to áchieve a fair trade of the land as quickly as possible." Buker went on to say, "We have always supported the purchase of the Talisman prop-erty as long as its used for water storage and as long as it does not result in higher taxes. does not result in higher taxes. Since this is what Vice President Al Gore and Secretary Babbitt announced, we support the purchase of Talisman for construction of a federal water

# Belle Glade man gets certificate from President Bill Clinton

Editor
If you ask long-time Belle
Glade resident Cleo Lealand
his age, he'll ask you to guess,
and you'll probably be wrong
by about 15 years.
The trim 77-year-old says he
can still do a backward flip off
the floor, and has the stamina
and appearance of a much
younger man. nger man.

younger man.

Mr. Lealand credits hard work and clean living for his longevity and good health. He has been doing lawn maintenance for 36 years and shows no signs of slowing down. He maintains up to 30 yards a week, with some help, and still manages to give time to his church and family.

He and his wife, Mattie, have worked all their lives and sacrificed to put four daughters through college.

Recently, Cleo was recognized by President Bill Clinton for his dedication to the Demo-

for his dedication to the Democratic party and his support for

the president.

The certificate is proudly displayed by Mr. Lealand in his home. He is also proud of the fact that he gets birthday cards from the president.

Cleo moved to Belle Glade in 1940 from Thorth South Care

Cleo moved to Belle Glade in 1940 from Liberty, South Car-olina: "I came with 19 other men to cut sugar cane. In a week's time, all the others had læft and went home. I stayed," he says. "Back then, it was mostly dirt roads in the Glades and it was a small town," he said.

He met and married Mattie and continued to do agricultur-al related work for Raoul and Haney Farms for another six years. Starting out as a chauf-feur, he moved up in the company to become a foreman before taking a job with Palm Beach Junior College as a bus driver taking Glades residents to the campus in Lake Worth. He also did yard maintenance in his spare time.
Cleo retired from PBCC after

them for 20 years and began his yard maintenance busine.

in earnest.
"I like to stay busy," said
Cleo. "My daughters would
like me to quit, but I feel bet-

like me to quit, but I feel bet-ter when I'm working," he said. He also stays active in church and sings in the choir. Clee and Mattie support many organizations, including the Florida Sheriff's Boy Ranch, The American Heart Association and the Boy Scouts of America

Association and the Boy Scouts of America. The Lealands had five daughters, but lost their oldest daughter to polio at the age of

Daughters Patricia Blanken-ship, Michelle Bird and Kim-berly Lealand still live in Beli-Glade and Detrick Pass now lives in Clewiston. They also have four grandchildren who keep them busy.

Mattie Lealand worked for

37 years for the state and county and retired from the Palm Beach County School Board.

# International Presiding Bishop to speak at Greater St. Paul Church of God in Christ

St. Paul Church of God in Christ, 915 West Avenue A, Belle Glade, will host the Eastern Florida Jurisdiction in a celebration in honor of the Jurisdictional Prelate, Bishop Jacob Cohen on Friday, January 9, at 7:30 p.m.

Representatives of more than 100 churches from St. Augustine on the north to south Miami on the southern end and westward as far as St. Petersburg will participate in this celebration.

this celebration.

this celebration.

The special guest speaker will be the International Presiding Bishop and Chief Aposite of the Church of God in Christ, Bishop Chandler David Owens. Bishop Owens has appeared with President Clinton on several occasions and participated in the summit on notunteerism. He has appeared on TBN on several occasions. He is the chairman of the General-Board for the Church of God in Christ, the administrative body of the church. The Church of God in Christ, whose worldwide membership

whose worldwide membership is in excess of five million including more than 45 foreign countries, celebrated its cen-tennial in November of 1997 at its headquarters in Memphis, Tennessee. In September, the

centennial celebration began in Lexington, Mississippi, the birthplace of the Church of God in Christ. A section of Highway 17 was renamed Charles Harrison Mason Charles

Charles Harrison Mason Memorial Highway in memory of the founder of the Church of God in Christ. The governor of Mississippi, as well as other legislative officials, was present for this unveiling.

"We are privileged to have in our city the leader of the largest Pentecostal denomination in the world and we welcome him," said Elder Clarence Brown, pastor of Greater St. Paul Church of God in Christ.
Pastor Brown said over 1,200 people are expected for

the service and the Belle Glade Police Department will be helping with security and

helping with security parking.

The Greater St. Paul Church of God in Christ has a sanctuary which holds 1,200 people.

Approximately 500 Glades residents attend services at the many control of the con

church each week.

Pastor Brown said the church members are involved church memoers are involved in numerous community activi-ties, including helping to feed the hungry. "Every few months we go to the Loading Ramp in Belle Glade and share the Gospel

Glade and share the Gospel and feed between 600-700 peo-ple," said Pastor Brown. The church also offers after-school tutoring. Between 25-30 chil-dren come every afternoon from 4 to 5:30 p.m. during the week for tutoring. Pastor Brown said future plans include starting a day care center.

During the Thanksgiving holiday, church members fed over 2,000 people at the Load-ing Ramp in partnership with a West Palm Beach restaurant. "We also help those who

need assistance until they can get help from federal agen-cies," said Pastor Brown.

Glades Central
